

ABOUT ME

Frontend Developer with an engineering foundation. I came to web development from electrical engineering — not by accident, but because I found what I was actually looking for: the place where logic meets design. What started as curiosity about how interfaces work turned into a deliberate career shift. I went through two structured programs, built real projects, and never stopped.

EXPERIENCE

Junior Full-Stack Developer

2025 – Present

Self-employed

Actively building full-stack pet projects to apply and expand skills across the entire stack. Developed a personal CV/portfolio site (belevtsov.dev) with a Node.js/Express backend, Telegram bot integration, Brevo SMTP email notifications, rate limiting, and Zod validation. Contributed to team projects including Money Guard and Gadget House.

Data Analyst / Tech Support Representative

Dec 2022 - Jan 2026

Supportive Care

Provided technical support and tailored client communication in a high-volume environment — each case required an individual approach and specific resolution. Generated 5–10+ operational reports daily, maintained data accuracy across CRM and internal database systems.

PROJECTS

Image Search Gallery — React + TypeScript

DemoGitHub

Built a React + TypeScript image search gallery (Vite) with Axios API requests, responsive UI, modal preview, pagination via "Load More", and clear UX states for loading and errors.

Phonebook App — Auth & Contacts

DemoGitHub

Developed a Vite + React phonebook app with JWT-based authentication, protected routes, and full CRUD for contacts using Redux Toolkit, redux-persist, Axios, Formik/Yup, and Material UI.

Money Guard — Frontend

DemoGitHub

Frontend team project for personal finance tracking integrated with backend API. Implemented logout flow (modal, API call, token cleanup) and transactions CRUD with practical UI wiring and data-flow validation.

Gadget House — Team Pet Project (React, TypeScript)

DemoGitHub

React + TypeScript team project contribution focused on UI/UX polish and admin dashboard styling. Worked through feature branches and PR workflow, improving component visual states and consistency.

SKILLS

Frontend

HTML5 · CSS3 (Flexbox, Grid) · JavaScript (ES6+) · React · React Router · Redux Toolkit · TypeScript · REST API Integration · Responsive Web Design · Vite · npm

Backend & Tools

Node.js · Express · MongoDB (Mongoose) · REST API Development · JWT Authentication · Authorization · Joi / Zod Validation · Nodemailer / SMTP · Multer · Cloudinary · Swagger / OpenAPI · Git / GitHub · Docker (Basic) · Postman · ESLint · Prettier · Agile / Scrum · CI/CD (Basic) · Render

EDUCATION

Full-Stack Web Development

2024 - 2025

GoIT

Full-stack curriculum: HTML5, CSS3, JavaScript (ES6+), React, Redux Toolkit, Node.js, MongoDB, Git. Built multiple projects including REST API integrations and responsive web apps.

Front-End Development

2022-2023

Beetroot

Front-end curriculum: HTML5, CSS3 (Flexbox, Grid), JavaScript (ES6+), DOM, REST APIs, Git, GitHub. React introduction. Built responsive landing pages and JavaScript applications.

Electrical Engineering

2009-2015

National Technical University "Kharkiv Polytechnic Institute"

Engineering degree with focus on electrical systems, automation, and analytical problem-solving. Strong systems thinking foundation applied to software development.

SOFT SKILLS

- Systems Thinking

● Problem-solving

● Attention to Detail

● Team Collaboration

● Communication

● Fast Learner

LANGUAGES

Ukrainian — Native

English — Advanced
